HAND WASHING FACILITY SET-UP

The most common cause of contamination during food preparation and serving is unclean hands. For this reason, hand washing facilities are a must. Facilities must be designed to provide unaided, easy hand washing under a continuous flow of running water. Water spigots of the push-button type will not be allowed.

THE HOW-TO'S OF HANDWASHING

1. Wet hands.
2. Apply soap.
3. Briskly rub hands for at least ten (10) seconds.
4. Scrub fingertips and between fingers.
5. Scrub forearm to just below elbow.
6. Rinse forearms and hands.
7. Dry hands and forearms with a disposable paper towel.
8. Turn off water with paper towel.
9. Discard paper towel.

KITCHENWARE WASHING PROCEDURE

After washing, rinsing, and sanitizing, items may be air dried or wiped dry with disposable towels and should then be stored in a clean place.

Provide appropriate sanitizer test strips and use them to monitor the concentration of the sanitizing solution. (If using bleach, maintain the chlorine concentration between 50 and 100 parts per million; this is approximately 1 T. bleach per 1 gallon water.)

Unscented chlorine bleach may be used to sanitize kitchenware. Other acceptable sanitizers include quaternary ammonia and iodine.

All waste water must be disposed of properly, to either a sanitary sewer or a drainfield.
